SUMMARY

Walmart Global Tech production reliability engineer with 2+ years owning incident response, observability, and workflow automation across 20+ enterprise applications spanning 5,000+ store locations. Led P1/P2 war rooms coordinating engineering and leadership under pressure, built monitoring infrastructure in Splunk and Grafana, and drove a 60% reduction in repeat incidents through postmortem-driven fixes. Strong cross-functional communicator with hands-on experience in GCP, BigQuery, GKE, and Python automation at retail scale.

EXPERIENCE

Walmart Global Tech | Software Engineer II, Application Production Support Sep 2023 - Aug 2025

- Built a Python automation tool using PyAutoGUI that eliminated a multi-step manual diagnostic workflow across store controllers and Postman, cutting item lookup time by 96% (2 min to 5 sec) across POS and Pharmacy systems processing billions in annual transactions
- Led production support for 20+ enterprise applications maintaining 99.9% uptime; served as primary technical escalation point during P1/P2 incidents, coordinating engineering and leadership to meet SLA targets and minimize business impact across millions of daily transactions
- Triaged a chainwide iOS outage affecting 5,000+ Walmart store locations by isolating platform-specific log patterns in Splunk and GCP Cloud Logging, escalating to a war room with engineering leadership, and driving full resolution within 5 hours; deployed a new KPI alert post-incident to prevent recurrence
- Used BigQuery and Postman weekly as primary diagnostic tools for item-related production issues, querying live inventory and transaction data to accelerate root cause identification across POS and Pharmacy systems
- Supported deployment validations alongside dev teams, monitoring GKE pod health and application logs in real time; identified deployment errors that triggered rollbacks, preventing broader outages across store systems
- Built Splunk and Grafana dashboards for error rate alerting, latency tracking, and system health metrics, cutting MTTD and enabling proactive incident identification; automated 30% of troubleshooting workflows via Python scripting
- Drove 60% reduction in repeat incidents through structured postmortem and root cause analysis, partnering with dev teams via Jira to implement permanent fixes; authored runbooks, maintained audit compliance, and participated in 24/7 on-call rotation

Fast Enterprises | Software Engineer, Production Support Mar 2023 - Sep 2023

- Triaged and resolved 50+ production tickets for the North Dakota DMV spanning UI defects, calculation logic errors, and new feature requests; collaborated directly with government officials to gather requirements and validate solutions against regulatory standards
- Independently identified bugs in both production and staging environments through hands-on system testing; coordinated fixes with dev teams and mentored junior engineers on system architecture and business logic

Lick Observatory, UC Santa Cruz | Web Development Intern Jun 2021 - Mar 2022

- Rebuilt 50+ web pages and resolved 200+ broken links across a UC Santa Cruz research site; designed migration-ready templates and restructured site navigation to improve accessibility and discoverability

PROJECTS

MochiFind | Sep 2025 - Present | React Native (Expo), TypeScript, Vercel Serverless, Supabase, Etsy Open API v3

- Shipped production full-stack mobile app with server-side API proxy layer protecting API keys; implemented CORS allowlisting, IP-based rate limiting (60 req/min), and multi-tier CDN + in-memory caching within Etsy API limits
- Built a plushie aggregator pulling real-time Etsy marketplace data with account creation, saved items, and purchase redirect; architected for multi-retailer expansion including Amazon and Walmart with taxonomy-based filtering, Supabase auth, and Row Level Security

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C#, HTML/CSS

Frameworks: React Native, React.js, Next.js, Tailwind CSS, Expo

Monitoring & ITSM: Splunk, Grafana, AppDynamics, ServiceNow, MTTD/MTTR, SLA/SLO, Runbooks, Incident Management, On-Call Rotation

Reliability: Root Cause Analysis, Postmortem, Observability, P1/P2 Response, Release Validation, Automation

Cloud & Infra: GCP Cloud Logging, BigQuery, GKE, Kubernetes, Vercel, Supabase, Oracle OCI, REST APIs

EDUCATION & CERTIFICATIONS

University of California, Santa Cruz | B.S. Technology and Information Management Jun 2023

Oracle OCI AI/ML Foundations | Oracle Cloud Infrastructure
